Applied AI Engineer (Agentic Systems, RAG, LLM Infrastructure)

- Applied AI Engineer specializing in production-grade agentic LLM systems and Retrieval-Augmented Generation
- Owner of end-to-end AI system development, from architecture and prototyping to deployment and evaluation
- Designed and deployed multi-agent and RAG systems for US and EU clients, supporting hundreds of active users
- Hands-on experience across AWS and Azure, including CI/CD pipelines and automated evaluation workflows
- Instructor and workshop facilitator, bridging technical implementation and real-world use cases

WORK EXPERIENCE

Promptior • 03/2024 - Present

Applied AI Engineer (Agentic Systems, RAG) • Full-time

- Designed and deployed production-grade Retrieval-Augmented Generation (RAG) pipelines and multi-agent systems integrating AWS Bedrock, Azure OpenAI, and open-source LLMs, supporting hundreds of active users in production.
- Owned the end-to-end lifecycle of AI systems, from architecture design and model orchestration to cloud infrastructure, CI/CD pipelines, and automated evaluation workflows.
- Contributed to applied R&D initiatives within Promptior's Augmented Behaviors Lab (ABL), experimenting with agent memory, multimodal interaction, real-time voice interfaces, and fine-tuning techniques to explore new human-AI interaction patterns.
- Designed and implemented prototypes and proof-of-concept systems to validate agentic architectures and inform product direction and technical decision-making.
- Collaborated closely with product, engineering, sales, and marketing teams to translate business requirements into deployable AI systems and client-facing solutions.
- Built internal testing and evaluation libraries for multi-agent systems, improving experimentation speed, reliability, and overall system quality.
- Supported client adoption and internal alignment by presenting system capabilities, technical trade-offs, and results to internal teams and external stakeholders.

ORT University • 07/2025 - Present

Course Instructor – Applied Technologies II: Tools for Artificial Intelligence • Full-time

SKILLS

Languages: C#, Java, Python, TypeScript

AI & Agentic Systems:

LangChain, LangGraph, Multi-Agent Systems, Multimodal AI, Real-Time Voice Interfaces, Retrieval-Augmented Generation (RAG)

Frameworks & Platforms:

Angular, ASP.NET Core, .NET, Next.js

Cloud & Infrastructure:

Amazon Web Services (AWS), Azure, CI/CD Pipelines, Docker, Terraform

Databases:

DocumentDB, MongoDB, PostgreSQL, SQL Server, Vector Databases

Development Practices:

API Design, Git, Scalable Systems

EDUCATION

Bachelor's Degree in Systems, Computer Engineering

ORT University
Montevideo, URY
GPA: 3.8
02/2020 - 12/2024

CPE, PROF

EF International Language Centers
Eastbourne, England
01/2019 - 12/2019

Intensive training at
Eastbourne, England, Lengua y literatura inglesa.

- Course instructor for an applied AI engineering course focused on modern LLM-based systems. Designed and delivered both theoretical and hands-on laboratory sessions covering large language models, prompt engineering, embeddings, vector databases, and Retrieval-Augmented Generation architectures.
- Guided students through end-to-end implementation of RAG pipelines using industry-standard tools such as LangChain and vector stores like Pinecone, Qdrant, Chroma, and FAISS, progressing toward agent-based systems with tool calling and orchestration. Evaluated students through individual assessments and supervised final project presentations centered on building practical, production-oriented AI solutions.

Codigo del Sur • 09/2022 - 12/2022

Software Developer • Internship

Ellen's Institute • 11/2018 - 02/2021

English Professor • Teaching

Teaching FCE, CAE and B1 Preliminary PET exam.
