AI/ML Engineer (Agentic Systems, RAG, LLM Infrastructure)

- AI/ML Engineer specializing in production-grade agentic LLM systems and Retrieval-Augmented Generation, owning the full path from architecture and prototyping to deployment and evaluation.
- Shipped multi-agent and RAG systems for clients across the US, the EU, and Latin America, some running in production with thousands of active users.
- Led an applied R&D lab building proof-of-concepts, and was the engineer teams called in to rescue projects under pressure.
- A rare mix of builder and communicator: delivered 15+ AI workshops, from deep technical sessions for engineers to strategy talks for executives, and teach Applied AI at ORT University.
- Hands-on across AWS and Azure, with CI/CD pipelines, Dockerized deployments, and automated evaluation workflows.

WORK EXPERIENCE

Zyte • Ireland (Remote) • 02/2026 - Present

AI/ML Engineer (Agentic Systems, Data Quality) • Full-time

- Building LLMNL, an AI-powered data-quality engine that automatically validates and enhances structured data across large-scale web-scraping pipelines, returning auditable pass/fail verdicts backed by concrete evidence.
- Designed long-running agentic workflows as sandboxed LangGraph deep agents, exposed over a native MCP server so any developer's agent can call them as a quality gate.
- Own the system end to end: agent architecture, per-task model routing, FastAPI and Next.js services, observability in Langfuse, and the cost, throughput, and scale trade-offs of running in production.
- Drove validation cost down to roughly \$0.15 to \$0.80 per run while continuously validating thousands of items in parallel.

Promptior • 03/2024 - 02/2026

Applied AI Engineer | Lead, Augmented Behaviors Lab (ABL) • Full-time

SKILLS

Languages: C#, Java, Python, TypeScript

AI & Agentic Systems:

LangChain, LangGraph, Multi-Agent Systems, Multimodal AI, Real-Time Voice Interfaces, Retrieval-Augmented Generation (RAG)

Frameworks & Platforms:

Angular, ASP.NET Core, .NET, Next.js

Cloud & Infrastructure:

Amazon Web Services (AWS), Azure, CI/CD Pipelines, Docker, Terraform

Databases: DocumentDB,

MongoDB, PostgreSQL, SQL Server, Vector Databases

Development Practices: API

Design, Git, Scalable Systems

EDUCATION

Bachelor's Degree in Systems Engineering

ORT University

Montevideo, URY

GPA: 3.8

02/2020 - 12/2024

CPE, PROF

EF International Language Centers

Eastbourne, England

01/2019 - 12/2019

Intensive training at

Eastbourne, England, Lengua y literatura inglesa.

- Led Promptior's Augmented Behaviors Lab (ABL), directing applied R&D in agent memory, real-time voice interfaces, multimodal interaction, and local fine-tuning, and turning research into prototypes that shaped product and strategy decisions.
- Designed and deployed production-grade RAG pipelines and multi-agent systems integrating AWS Bedrock, Azure OpenAI, and open-source LLMs, owning the full lifecycle from architecture to deployment and supporting hundreds of active users in production.
- Drove a new AI product from concept toward 5,000+ monthly users, directly improving customer engagement and retention.
- Built the cloud infrastructure and MLOps behind it: Dockerized deployments, CI/CD pipelines for AI models, and automated evaluation workflows that kept performance consistent at scale.
- Created internal testing and evaluation libraries for multi-agent systems, and delivered 15+ technical workshops to upskill engineering teams.
- Acted as the bridge between engineering, sales, and marketing, translating complex AI capabilities into business value and presenting to clients and stakeholders as a thought leader in applied generative AI.

ORT University • 07/2025 - Present

Course Instructor – Applied Technologies II: Tools for Artificial Intelligence • Full-time

- Course instructor for an applied AI engineering course focused on modern LLM-based systems. Designed and delivered both theoretical and hands-on laboratory sessions covering large language models, prompt engineering, embeddings, vector databases, and Retrieval-Augmented Generation architectures.
- Guided students through end-to-end implementation of RAG pipelines using industry-standard tools such as LangChain and vector stores like Pinecone, Qdrant, Chroma, and FAISS, progressing toward agent-based systems with tool calling and orchestration. Evaluated students through individual assessments and supervised final project presentations centered on building practical, production-oriented AI solutions.

Codigo del Sur • 09/2022 - 12/2022

Software Developer • Internship

Ellen's Institute • 11/2018 - 02/2021

English Professor • Teaching

Teaching FCE, CAE and B1 Preliminary PET exam.
